

## **Innovative Dive Equipment Inc.**

**This Item is designed for use with the “Accessory Rail System” that we manufacture for the Interspiro Divator MK II (AGA) Full Face Mask**

**The Innovative Dive Equipment Pole Knuckle allows for the quick attachment, and removal of submersible video cameras and lights when it is desirable to drop a camera on a pole for searching, or to check for hazards before a diver enters the water.**

**The camera and lights are attached to a “Universal Slide” (available separately) which is then easily slid on to the accessory rail on the pole knuckle. After use the camera and light can be removed from the knuckle while still mounted on the universal slide, and then slid onto an accessory rail on the divers mask to further document the dive.**

**Accessory Rail Pole Knuckle \$93.60 USD**

**(Additional Universal Slides Purchased seperately \$98.80 USD)**
