

## **AGA Divator MK II Accessory Rail System with the S-Sun Light**

**The accessory rail system easily attaches to the AGA Divator full face mask and makes it possible to mount various devices to the sides of the mask. This version has the S-Sun LED Diver Headlight mounted to the accessory slide. Other devices can be attached to the rail by adding additional “Universal Slides” (purchased separately). Cameras, lights and other devices are then changed by simply sliding them on or off the rail. This quick disconnect feature allows surface support to quickly exchange or replace devices as the mission dictates without removing the mask from the diver, or the diver from the water. One rail may be used or two may be mounted (one on each side). The attachment method does not interfere with commonly used surface breathing valves.**

**Attaching the rail system to the AGA mask makes it possible for a diver to have both hands free to accomplish difficult tasks underwater.**

**No tools are used to attach the rail system to the mask. Two nuts are simply tightened by hand to secure the rail system to the mask. No modifications are needed, and the rail is easily removed for mask maintenance.**

**The rail system is not mass produced, each one is made and assembled individually, and manufactured using quality materials.**

**Accessory rail system (1) with S-Sun led light (mount attached) \$208.00 USD**
