

SSB 2010 COMMS BRACKET

The Innovative Dive Equipment Inc. "Comms Bracket" is the answer to problems mounting the OTS 2010 comms box to your dive equipment. It enables the diver to place the comms unit in the most favorable position for underwater communication while in the horizontal searching position, as well as other positions. The bracket allows the use of the tank band to hold the comms box, and does not interfere with tightening, or securing the tank band. The bracket is manufactured from 3/16 inch 304 stainless steel wire and is suitable for all diving environments.

This simple device is used by Public Safety, & Military divers to mount the OTS SSB 2010 to their SCUBA diving rigs. It may also be used to anchor other diving accessories.

Order 1 – 5 brackets@ \$15.00 USD each
